

Cooler GuardTM

Timed-Released Maintenance For Evaporative Coolers

Evaporative Cooler Maintenance

Millions of dollars get spent replacing evaporative cooler parts only because they are scaled up.

Scaled pad surfaces decrease the unit's efficiency and increase the potential of moisture getting into the air stream.

Neglected coolers contain sludge and other deposits in the sump, affecting the quality of the air which runs through them

The problem of scale deposit build up is real. Time consuming clean up using acids and other harsh chemicals can be a hazard. But this can be prevented.

Cell Deck Without Cooler Guard

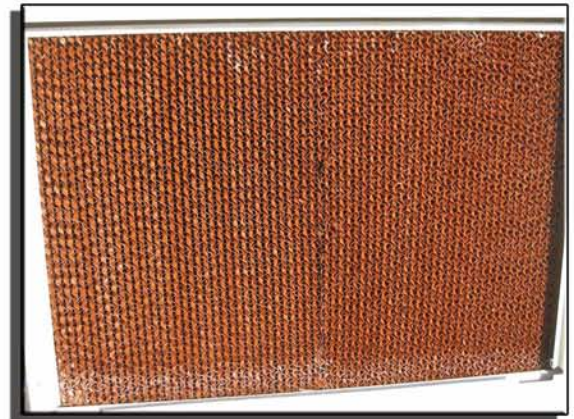

Cooler GuardTM

TIMED-RELEASED MAINTENANCE FOR EVAPORATIVE COOLERS

Works continuously in the cooler water, keeping the unit clean.

- Cleans wherever the water reaches.
- Dissolves the build up that causes corrosion.
- Guards against future deposits.
- Extends cooler pad life indefinitely.
- Provides a fresh cooling environment.
- Keeps units clean and trouble free.
- pH neutral to preserve pad life.
- Maximizes air flow for top efficiency.
